

INTRODUCING

Serveon Sealants

SD200 - STEELCRETE PRO

The Professional Solution For Concrete and Limestone

Weatherproofing - Stain Blocking - Water Tolerant

New, breakthrough technology, water tolerant - seal after powerwashing, resists most stains even red wine, densifies/strengthens, prevents efflorescence, minimizes dirt pick up

Makes substates look better - last longer

SD200 is the professional solution for protecting and preventing/minimizing staining and efflorescence on concrete, concrete products and limestone. SD200 is a penetrating, surface and subsurface densifying impregnating molecular bonding treatment. It integrally waterproofs, densifies and preserves concrete and limestone of any age while modifying the surface structure producing a hard, long-lasting, abrasion scratch and stain resistant surface.

SD200 brings the first roller-bearing concept to coatings. The unique micro-smooth surface causes vegetation, leaves, soil and other discoloring particulate to naturally wash or blow off in rain, wind or with a hose removing the presence of potential staining.

Manufactured by Serveon Sealants LLC www.serveonsealants.com

FEATURES

- Weatherproofs/Waterproofs
- Seals over wet surface
- Prevents Efflorescence
- Permanently Densifies/Strengthens
- Resists Staining
- Prevents Red Clay Staining
- Minimizes Dirt Pick Up
- Little to no Color Change
- Builds High Traffic Surface
- Long Lasting
- Waterborne, Low VOC

APPLICATION

- Apply with Pump Up Sprayer
- Most Applications One Coat
- Ready for Foot Traffic 2 Hours
- Full Cure 48 Hours
- Use Indoors or Outdoors

PACKAGING

SD200 is available in 1-gallon/3.78 L bottles, 5-gallon/18.9 liter pails and 55-gallon drums.

COVERAGE

Coverage will vary depending on porosity and absorption (200 sq ft - 400 sq ft).
